

Remote sensing study of jian area

LAK, RAZYEH, Geological survey and mineral exploration of Iran, Tehran, Iran

I Studies jian in 53, 30-54E latitude, 30, 30-31N longitude
my aims of this study are :

- 1: Preparation rock units map for geological map
- 2: Seperation 3 Kinds of quaternary units on the base of ages.
- 3: Seperation 4 parts of desert (mud flat, poor salt, solfat zone, salt lake)
- 4: presentation of argiliceous alteration zone silisification zone and Iron oxid alteration zone for recognition of promissing area for coper and Barit mine, Iran oxid mine.

I used Ratio and Difference method and composed many images.

Based on this method is the highest and lowest brightness degree made on special image.
