

ENVIRONMENTAL PRE-AUDITING P.G LA TOMA S.A COMPANY

1MORENO, R.S., 1GIL FIORENZA, A.M. 1Department of Geology Applied, Secretary of Industry and Mining, Province of Córdoba, Argentine .

The main purpose of this work is to evaluate the present environmental situation of the current activity, in order to start the process of environmental measures of the audited company and to insert it in the environmental features which are established at international level. In order to do this evaluation, the methodology proposed by Vicente Conesa Fernández-Vítora, for the Initial Revision or Pre-auditing in the Methodological Handout for Environment Auditing, was used. P.G LA TOMA S.A was the company chosen, which performs mineral grinding in the province of San Luis in the Argentine Republic. Once the necessary information, concerning the industrial plant and its process of production as well as the physical, social and economic surroundings of the area, was gathered, the writing of the Environmental Impact Study started, as part of this auditing and its purpose is not to predict but to identify and evaluate the environmental impact that this activity produces on its surroundings. The conclusion is a series of proposals referring to the measures to mitigate the established impacts and corrective course of action and some pieces of advice to develop a System of Environmental Management according to this company's policy.
